When considering Stretcher Bars...

...it's important to compare 'like for like'

Some bars might seem the same but are actually like...

Wood. We sell quality **European Pine** stretcher bars; the type of pine that furniture is made from. They have a good weight and feel in the hand to create the best impression.

We manufacture in Europe for quality and consistency **BUT not all bars from Europe are the same**. Our bars are made exclusively for us; no one else sells the same in the UK and our customers regularly tell us that ours are the best! Why not get a sample?

Pictures can lie – in the last few months we've asked 3 different stretcher bar sellers to kindly not use our images to sell their bars (well we can't blame them for trying!) but it's best to get a sample. The real test of a product though is using it over the long term.

Don't get knotted – knots are imperfections that weaken timber. Our stretchers are knotless and straight. They're also smooth and cut to precision for easy assembly.

Wedges – we're all wood! Plastic *is* cheaper but probably looks it too. With our wooden wedges your customers know that you haven't scrimped.

Satisfaction Guarantee – if you're not happy with any of our bars we'll give you a refund, simple as that. We won't leave you with boxes of bad stock.
